

Stallion Information

February 2021

Stallion information 2021

We provide the Stallion information 2021 as a tool to help with stallion choices. Opting for the best-quality stallions when choosing a stallion is not the only key factor to be considered, making correct pairings is even more important. The KFPS strives to provide as many data as possible about hereditary aspects of stallions.

Which stallions?

The 2021 edition lists all active stallions. When looking at breeding values for exterior it must be taken into account that the data of young stallions do not include information of their offspring. These breeding values are based on lineage information and exterior assessment (linear scores) of the stallion itself. For stallions that have completed progeny testing the breeding values are almost completely based on inspection data (linear scores) and ABFP data of offspring. The reliability of breeding values for young stallions is still low. This means that their breeding values are more likely to change (when more offspring are inspected or tested) than in the case of older stallions with a high reliability index. Because of this lower reliability of breeding values for young stallions, these are based on a more reserved estimate and are therefore closer to the breed average (100).

Which characteristics?

The following characteristics of stallions are listed:

1. Breeding value (linear) exterior characteristics
2. Breeding value for movement/sport aptitude

Breeding values exterior and sport aptitude

Considering the complexity of breeding value estimates for exterior characteristics and sport aptitude, it is necessary to provide an explanation about how these figures should be interpreted and how they are compiled. The explanation also pays attention to how these figures can be used for stallion choices.

Linear exterior characteristics

The breeding values for the exterior characteristics are based on the linear scores, which have been recorded at the moment of acceptance of horses in the Studbook since 1993. Scores ranging between 5 and 45 are recorded for 25 exterior characteristics, with the average being 25. In the case of linear characteristics we are strictly dealing with observations, and not evaluations. The choice of characteristics is such that the linear report provides a picture of the horse's exterior that is as complete as possible. The linear characteristics are divided into two entities:

Optimum characteristics: characteristics with the average score (25) or breeding value (100) being the most favourable. Examples of such characteristics are: back conformation and hind leg conformation.

Maximum characteristics: characteristics based on the principle of the higher the score the better (e.g. expression of the head, movement expression etc.) or characteristics where the optimum clearly lies above the average, like neck conformation and shape of the hoof. The differences are made visually recognisable because

the breeding values for maximum characteristics are represented in dark-blue bars (favourable) and red bars (unfavourable) and breeding values for optimum characteristics in light-blue bars. In addition to the 25 linear characteristics the overview lists a measured characteristic, height at withers.

Rating exterior characteristics

In addition to the 25 linear exterior characteristics, scoring is also done for 3 rating characteristics: breeding type, conformation and legwork. Whereas linear characteristics are mere descriptions, the rating characteristics are evaluative. For the assessment of the rating exterior characteristics the related linear characteristics play an important role. The rating characteristics are scored within the range of 4 to 9. Since 2016 the marks for rating characteristics that are scored in the context of upgrading are also included in the breeding value estimate. Additionally, since 2017 the lower bar figures scored in the classes for Star mares are also included in the breeding value estimate.

Movement and sport aptitude

The breeding values for the movement characteristics walk, trot and canter are computed on the basis of the scores for walk and trot in the exterior inspection and the scores for walk, trot and canter from the aptitude tests (ABFP and IBOP). The higher the number of offspring whose information is collected from the aptitude tests, the smaller the influence of in-hand movement will be for breeding values. In case of large numbers of offspring and the information derived from their aptitude tests, the influence of in-hand movement even becomes virtually zero. The reason for this being that movement in the aptitude tests (under saddle and in harness) is closer to the breeding goal than in-hand movement.

Character

Breeding values for character are included since the 2020 edition. This information stems from the twenty offspring in the ABFP Tests that are scored on character by the rider team. The published character/personality characteristics are: reliability/predictability; trainability; willingness to work and stamina.

Estimation model

The breeding values, estimated by CRV, are estimated with a so-called estimation model. The estimation model indicates which factors that influence the differences between (in this case) stallions are subjected to corrections. The exterior scores are corrected for the following effects: Breeding value of the offspring's dam, age at the moment of inspection, gender; Jury member and inspection. This correction is carried out in order to produce the clearest picture

possible of the degree in which the differences between batches of offspring are caused by a difference in genetic aptitude of the stallions. Because of these corrective factors it basically does not matter if one stallion is paired to higher-quality mares than others. The type of estimation model used is the so-called animal model. Along with data of offspring, animal models also include information of relatives. The contribution of this information decreases as the available information of offspring rises.

Interpretation of breeding values

Breeding values are set at an average of 100 with a range of 4 points on either side. This basis was fixed at 2001. The average breeding values of all horses born in 2001 was fixed at 100 for every characteristic and the range (standard deviation) of these breeding values was fixed at 4. Breeding values with a deviation from 100 of one time the range (between 96 and 104) have to be considered as being average. Over 2/3 of the breeding values is found in this area. It is self-evident that the larger the deviation from 100, the bigger the expected effect will be. A stallion with a breeding value of 109 or higher for say, movement expression, ranks with the best 2% of stallions in the population. With a breeding value higher than 112 this is 0.1%. The breeding values for total-exterior and total-movement are the average of the underlying characteristics (breeding type, conformation and legwork respectively walk, trot and canter), multiplied by 1.25 in order to achieve a range of 4 for the total-breeding values.

Description of breeding values

The breeding values are depicted by 'bars' per individual characteristic. As pointed out, the maximum characteristics are printed with dark-blue (favourable) and red (unfavourable) and optimum characteristics with light-blue bars. For optimum characteristics, (extreme) deflections to the left or right represent an unfavourable picture, 100 is the optimum.

Summarising: bars to the left are usually unfavourable and bars to the right are favourable, except for the light-blue bars.

Reliability

The degree in which the breeding value gives an accurate picture of the true genetic aptitude of a stallion is expressed in the reliability (btbh.). The reliability is chiefly influenced by the number of inspected offspring. Breeding values with a low reliability can still change considerably when more offspring are inspected. The reliability can be interpreted as follows:

btbh.	interpretation
< 70%	moderate reliability
70-80%	reasonable reliability
80-90%	good reliability
>90%	very good reliability

Use of breeding values

The breeding values for exterior are an excellent tool for making the right pairing combination. The way to do this is by checking the mare's linear score form for points that have to be corrected. If the characteristic that needs to be improved is a maximum characteristic then a stallion must be selected who has a (distinctly) positive hereditary image for passing on this characteristic (bar to the right).

If it is an optimum characteristic then the best choice would be a stallion with a (light) deviation in the opposite direction, depending on the mare's score.

Use of breeding values for sport aptitude. As you can see there are estimates for breeding values of basic gaits in the exterior bar and in the sport aptitude bar. The first is based on the assessment of basic gaits in the inspection ring (in-hand), whereas the second is based on the assessment of basic gaits in use (ABFP Test). For most stallions these breeding values largely overlap. There are however, stallions whose breeding value for basic gaits in the sport index is a fair bit lower than the breeding value for basic gaits in the exterior bar. As the breeding goal stimulates the breeding of horses with good basic gaits in use, the breeding values for sport aptitude should carry more weight in your evaluation of stallions.

Kinship percentage

Studbook stallions are given a kinship percentage. This figure states the relatedness of the stallion with the population. The lower this figure, the bigger such a stallion's contribution to variation in bloodlines can be. The average percentage of Studbook stallions lies around 17.8%. The kinship percentage is computed by calculating the inbreeding of fictitious foals from combinations of all individual stallions with the mare population. The mare population being defined as all filly foals born in the past three years, in total over 8000 animals. For the inbreeding calculation all known generations are included (so not just the first five generations). The kinship percentage is influenced by the degree in which the bloodlines match, or deviate from the population. When a stallion is used more often the kinship percentage will increase. The kinship percentage is one of the characteristics that are taken into account for the young stallion selection, with the aim to limit the increase in inbreeding. This edition is the first in which corrections are applied for missing pedigree information in the calculation of kinship percentages. This is the reason why the kinship percentage for stallions with a 'short dam line' has been revised upwards.

Total Index

A Total Index is being calculated since 2020. The aim of this Total Index is to make a ranking of stallions and mares on the basis of quality. In this Total Index, exterior and movement/sport aptitude are weighed in with the ratio 40:60. Additionally, the kinship is weighed in in such a way that selection based on the Total Index does not lead to an increase in inbreeding. The intention is to add breeding values for character, sport, life expectancy, etc. to the Total Index in the future.

Stallion information on the website

On the KFPS website (www.kfps.nl) information about stallions can be found under Information on breeding and via MyKFPS. By stating selection criteria it is also possible to make selections in stallions.

EU Stations in the Nederland

- * The list is final until the end of January. When there become new stallion stations, then this list will be updated on www.kfps.nl
- * It is possible that certain stallions have frozen semen according to the EU rules. Notify always at the stations for the possibilities.

Beant 517

Studbookname: Beant fan de Lege Geaën

Pedigree: Hessel 480 x Model Sport Tsjalle 454 x Ster Gjalt 426 x Ster Sport Pref.*6 Folkert 353

Date of birth: 10 maart 2016

Height at withers: 1.71 m **Pedigree:** 103

Kinship: 18.1 % (Average in 2020 17.8 %)

Exterior:

Breeding type: Beant 517 is a breed-typical stallion, the head is slightly longish but has satisfactory expression. With his long, vertical neck the stallion shows a lot of front. The stallion has abundant feathers and coat colour is black.

Conformation: Beant 517 is a big-framed, somewhat classical, longlined stallion. The head-neck connection shows heavy musculature and rises deep from the chest. The stallion has a horizontal body shape.

The shoulder has satisfactory length and sloping conformation. The withers are well-developed but should have a more flowing connection to the back. The loins are slightly lacking in connection. The croup has good length with the desired conformation.

Legwork: The slightly coarse legwork fits the stallion's build. Dry quality of the legwork is satisfactory. Stance of the forelegs is correct. The hind side of the hock is a little coarse.

DNA-tests:

Dwarfism: non-carrier status

Hydrocephaly: non-carrier status

Chestnut factor: non-carrier status

Performance Test:

Training report: Beant 517 attended the CE 2019/2020 and left the CE with 76 points for the riding horse part. Via the after-inspection in front of the carriage he was again selected for the CE 2020/2021. In the course of this CE, Beant 517 has shown good progress in the basic gaits. Beant is a reliable, somewhat phlegmatic stallion with a good mentality. He needs to develop a sharper response to the aids. In the course of the examination this has improved. He has a pleasant character and gives riders as well as drivers a good feeling.

Walk: The walk is very roomy, regular, active and displays much use of the body and shoulder freedom. The hind leg shows lots of activity but strides should be a fraction quicker.

Trot: The slightly listless trot is roomy and has tact, lots of shoulder freedom and a great deal of suppleness. Beant 517 stays a little high in the croup. In trot the hind leg should step forward with more speed but during the training sessions of this CE this aspect improved. He has good capacity for extending paces but still struggles with the downward transitions. In working trot he moves with lots of balance and more than satisfactory self-carriage.

Canter: The canter is uphill, a little slow and should be more light-footed. The riders however say that the canter gives a good feeling and that trainability in this pace is more than satisfactory. During the examination Beant 517 has grown stronger so the canter has improved and has become more engaged.

Riding horse aptitude:

Beant 517 has more than satisfactory aptitude as a riding horse. He has an easy way of moving with great suppleness and satisfactory posture. Beant is a little phlegmatic but gives his riders a very fine feeling and trainability is more than satisfactory. The canter shows more than satisfactory quality.

Driving horse aptitude:

Beant 517 demonstrates lots of talent for

the in-harness work. As a driving horse he has good posture and trainability in this discipline is good. He trots with roomy strides and a lot of suppleness and gives his driver a good feeling.

Beant 517 has developed well as a showdriving horse and proves to have great talent for this discipline. He has satisfactory go, transitions are good and he demonstrates lots of scope in movement with a good moment of suspension. His body posture is good and he should make a little more front with his neck. He displays a good show trot in front of the carriage.

Test results riding test:

Walk	8.
Trot.....	7.5
Canter	6.0

Use hindleg.....	8.0
Suspension.....	7.5
Posture	7.0
Front.....	7.5
Suppleness	7.5
Impulsion	7.0
Total	82.5

Findings Performance Test:

Beant 517's progress during this examination is more than satisfactory to good in all three disciplines. His movement has scope and lots of suppleness. Trainability of this slightly phlegmatic stallion is more than satisfactory to good. Beant 517 has a pleasing and fine character and gives drivers and riders a good feeling.

Dam report:

General: The 9-year-old Model mare Lobke fan de Lege Geaen Model Sport is breed-typical but could be a bit more longlined. The head is expressive, the head-neck connection should be lighter and the neck is long. The shoulder has the desired sloping conformation, the withers should be better developed and flow more through to the back. The topline should show more durability. Croup conformation is sloping compared to the population average. Because of the long foreleg body shape is horizontal. Both foreleg and hind leg are correct and with good stance. Clean and dry quality of the legwork is satisfactory.

The trot is regular and roomy. This mare displays lots of scope and suppleness in trot and places the hind leg well under the body with good activity.

Dam line: Beant 517 is a son of the 9-year-old Lobke fan de Lege Geaen Model Sport (Tsjalle 454). This mare has three registered offspring. In addition to Beant there are a 3-year-old second premium Star mare (Markus 491) and a 2-year-old mare.

His granddam, the 13-year-old second premium Star mare Ynskjen fan de Lege Geaen (Gjalt 426) has three registered offspring.

The 17-year-old 3rd dam Liaukje fan de Lege Geaen Star Sport Pref.*6 (Folkert 353) has so far thirteen registered offspring, six of them with the Star predicate.

Although we don't find that many sport horses in the dam line, there are three horses that compete at Z1 level with six or more winning points.

Final conclusion:

Beant 517 has a good exterior and good lineage. He has completed a good test. On the basis of these findings the stallion will be registered in the Stallion Studbook under the name of Beant 517.

Advice:

Beant 517 is expected to improve the walk, suppleness and scope in trot. He is best paired to mares with a strong topline.

Dedmer 519

Studbookname: Dedmer fan Klaeiterp

Pedigree: Alwin 469 x Model AA Teeuwis 389 x Ster Jasper 366 x Ster Pref.*4 Tsjalling 235 **Pedigree:** 110

Date of birth: 14 mei 2017

Height at withers: 1.65 m

Kinship: 18.4 % (Average in 2020 17.8 %)

Exterior:

Breeding type: Dedmer 519 is a youthful, breed-typical stallion, the head has satisfactory expression. With his long, vertical neck the stallion shows a lot of front. The stallion has satisfactory feathers and coat colour is black.

Conformation: Dedmer 519 is longlined. Stance of the long neck is light. The stallion has a little bit of a horizontal body shape. The shoulder has satisfactory length and sloping conformation.

The withers are well-developed and flow smoothly through to the back. The topline should be a little stronger. The loins have satisfactory connection and the croup is long with the desired shape.

Legwork: The delicate legwork is dry and radiates quality. Stance of the stallion's foreleg is correct but the feet slightly lack size. The hind legs are slightly sickle-hocked.

DNA-tests:

Dwarfism: non-carrier status

Hydrocephaly: non-carrier status

Chestnut factor: non-carrier status

Veterinary: Left fore lateral separate ossification centre hoof cartilage *

Roaring: category acceptable

Performance Test:

Training report: Dedmer 519 is a reliable, athletic stallion who did well in the Performance Test and has shown a strong development in his performances. In the course of the test his performances have become more constant. The stallion has a good mentality. Response

to the aids should become a little sharper. He gives his riders and drivers a good feeling and is easy to train.

Walk: The walk is roomy and with good use of the body. The hindleg needs to develop a bit more bend in the hock.

Trot: The trot has good scope, suppleness and a hind leg that could show a little more activity and power. He has a naturally good posture. Dedmer 519

displays expressive use of the foreleg which is placed generously forward.

Placing of the hind leg under the body is more than satisfactory and responds well to training. Dedmer 519 demonstrates good self-carriage. Transitions in trot are good, he has a generous moment of suspension but in the extensions he should keep moving in a more closed outline.

Canter: The canter has satisfactory power, is ground-covering and with a satisfactory uphill outline. At the start the left-lead canter and the right-lead canter were not equal. This aspect has improved well, which is very beneficial for the closed outline as well as the connection and balance in canter.

Riding horse aptitude:

Dedmer 519 is very talented for the ridden discipline. He has good self-carriage and three good basic gaits, but moving in a closed outline is a point of attention. In ridden work he is easy to train and a good ride.

Driving horse aptitude:

Dedmer 519 is very talented for driving and showdriving work. Because of his front and good posture he makes a strikingly appealing appearance in front of the carriage. He is an easy mover with very expressive use of the foreleg, showing lots of knee action as well as shoulder freedom. The hind leg should step under the body with more alacrity. In showdriving Dedmer 519 has a very attractive front, rises well in the neck, has good body posture and excellent use of the body. This results in a very long moment of suspension in the ground-covering trot.

In the course of the test Dedmer 519 has gained strength, which has also improved the contact and moment of suspension.

Test results riding test:

Use hindleg.....	7.5
Suspension.....	8.0
Posture	8.0
Front.....	8.0
Suppleness	8.0
Impulsion	7.5
Total	87.0

Findings Performance Test:

During the examination Dedmer 519 has gone through a positive development in all three disciplines.

He gives his riders and drivers a good feeling and responds well to the aids. He moves with good body posture, lots of suppleness and good self-carriage. The hind leg displays more than satisfactory activity, he steps well forward under the body and the trot has good shoulder freedom. With his uphill body posture and front he makes a great impression as a showdriving horse.

Dam report:

General: The 13-year-old, longlined Wealtsje A still radiates quality, durability and vitality. She flaunts great breed expression with her noble head and well-shaped, long and vertically-built neck.

She has the desired sloping shoulder conformation, the withers flowing well into the back. She has a strong topline and a long croup. Body shape is horizontal. The legwork radiates dry quality. Movement sequence in the foreleg is slightly winging out-going wide. The hind leg has the desired angle in the hock.

The walk is ground-covering showing tact and regularity.

She has a roomy trot and the hind leg is folded nicely under the body.

Dam line: Dedmer 519 is the best-known of the eight offspring of 13-year-old mare Wealtsje A. Model AA (Teeuwis 389). This mare became Champion and Reserve Champion on breeding days and at the CI on several occasions. She also competes successfully in dressage at Z1 level herself. Her 8-year-old son Maile fan Klaeiterp Sport (Stendert 447) competes at the same level. Wealtsje A. is a daughter of the first premium Star mare Eefje A. (Jasper 366) who has eight registered offspring, with Wealtsje A being the most famous. Granddam Lobke A. Star Pref. *4 (Tsjalling 235) has fifteen registered offspring.

Via Liesbeth Model Pref.*8 (Mark 232) this mare comes from the well-known Neenke dam line of pedigree 110. This dam line also contains other offspring with good results in dressage and showdriving.

Final conclusion:

Dedmer 519 has a good exterior and good lineage. He has completed a very good test showing lots of talent for all three disciplines. On the basis of these findings the stallion will be registered in the Stallion Studbook under the name of Dedmer 519.

Advice:

Dedmer 519 is expected to improve mentality, breed expression, athletic capacity and movement technique. The stallion can be widely used.

* Lateral separate ossification centre hoof cartilage is a light form of ossification of the hoof cartilage. Ossification of the hoof cartilage is an observation emerging from the X-ray examination. Based on Regulations this is no ground for exclusion from participation in the Second Viewing, but it is part of the assessment. Ossification of the hoof cartilage can have a hereditary origin but can also be caused by trauma. The guidelines as determined by the Breeding Council with regard to acceptance versus non-acceptance of a stallion with ossification are the following: Only stallions with a light form of ossification are acceptable and only then if the image proves not to be progressive. In order to establish this, new X-rays will be taken just prior to the start of the Performance Test, which will be compared to the pictures that were taken roughly a year earlier. With regard to Dedmer 519 the following has been established:

- 1) There is a light form of ossification of the hoof cartilage;
- 2) The picture was not progressive;
- 3) Ossification was only found in the left fore, which makes trauma a more likely cause;
- 4) As far as the KFPS is aware, the lineage does not show up any stallions who pass on above-average ossification of hoof cartilage.

Foeke 520

Studbookname: Danny van de Olde Mette Moate

Pedigree: Jehannes 484 x Ster Pref.

*4 Prest. Onne 376 x Ster Pref.*5 Teunis 332 x Model

*** physical

bit is still variable and he is sensitive to his surroundings.

Foeke 520 has a good mentality. He reacts sharply to the aids, has lots of go and very good movement technique. He gives riders as well as drivers a very good feeling.

Walk: The walk has scope and is powerful

with rhythm and good suppleness.

Trot: The trot shows good movement technique, is very constant with lots of balance, self-carriage and suppleness. In the foreleg we see ample reach in front and knee action. The hind leg steps under the body with good bend. In trot Foeke

520 demonstrates good self-carriage and presents a fine picture with good front. **Canter:** The canter shows quality and uphill quality of strides is more than satisfactory too but Foeke 520 must learn to move with more looseness. Balance and closed outline have improved in the course of the test.

Riding horse aptitude:

Foeke 520 has very good quality for the riding discipline. He has a good mentality, good work ethics and trainability is very good. Foeke 520 sharply reacts to his environment and then quickly loses his focus.

He has good movement technique in all three paces. Foeke 520 shows very good posture in the work and moves with lots of balance, self-carriage and suppleness. The canter still needs to gain strength.

Driving horse aptitude:

In front of the carriage Foeke 520 is very talented as a driving- and showdriving horse. He has good posture and good movement technique. He is still quite aware of his surroundings which sometimes affects his use of the body and the contact on the bit. When he relaxes Foeke 520 moves with good posture and then displays ample self-carriage. He also has ample suppleness and a long moment of suspension. The hind leg steps well forward under the body with good bend. In trot Foeke 520 shows good forward reach of the foreleg with lots of knee action. He is very forward-going. Foeke 520's trainability in front of the carriage is very good and he gives the drivers a very good feeling.

Test results riding test:

Front.....	8.0
Suppleness	7.5
Impulsion	8.0
Total	86.0

Findings Performance Test:

In the course of the test Foeke 520 has shown good progress in all three disciplines. When working he is easily distracted but he displays ample willingness to work, is easy to train and moves with a lot of balance and self-carriage. He has a naturally good posture. In front of the carriage his typical showdriving appearance positively catches the eye.

Dam report:

General: This appealing 18-year-old mare Hadewich (Onne 376) still radiates ample durability and youthfulness in her exterior and is still in good condition. The small head is expressive. The head-neck connection is light. The neck should be a bit longer and rises a little deep from the chest. The neck has the desired, vertical direction. The topline is strong with good connections. Compared to the population average croup conformation is sloping.

Partly because of the long foreleg the body shape is horizontal. The foreleg is a little standing-under and the hind leg is fairly straight in the hock. The pastern in the hind leg shows some wear with the broken foot axis. Development of the feet is satisfactory. The mare still shows lots of hardness in the legwork. The walk is regular and ground-covering but should have more bend in the hock. Motion sequence of the foreleg is slightly dishing/winging in. For an 18-year-old mare the trot displays more than satisfactory rhythm, regularity and correctness.

Dam line:

Foeke 520 is the last but one registered offspring of the 18-year-old Star, Pref.*4 and Perf. mare Hadewich (Onne 376). Up till now this mare has thirteen registered offspring, with the mares Odewich van de Olde Mette Moate Crown Sport AA (Stendert 447) and Rafaella van de Olde Mette Moate Model AA (Beart 411) being the most striking examples. Additionally, another two offspring have been declared Star.

Granddam Tyalda fan Ychten Star Pref.*4 (Teunis 332) comes from the well-known and very successful Benedictus breeding line with Marrit B. Model Pref.*7 (Oege 267) and next Wijkje Model Pref.*6 Perf. She is the dam of for instance Studbook stallions Djurre 284 and Tjerk 328 Sport Pref. and the well-known showdriving mares Metsje B. Model (Ritske 202) and Jelkje Model (Ritske 202). Tyalda fan Ychten has twelve registered offspring with Hadewich and also the mare Tanwen D. Crown AA (Folkert 353) standing out the most.

The 3rd dam Marrit B. Model/Pref.*7 (Oege 267) has in total fourteen registered offspring, seven of them with the Star predicate.

In the dam line we find nine offspring who are level Z1-qualified for dressage or higher. This dam line from pedigree 38 has proven to have quality as well as good fertility.

Final conclusion:

Foeke 520 has a good exterior and good lineage. He has completed an excellent test showing lots of talent for all three disciplines.

On the basis of these findings the stallion will be registered in the Stallion Studbook under the name of Foeke 520.

Advice:

Foeke 520 is expected to make a positive contribution to the breed characteristics, conformation, walk, trot and use of the body. He is also expected to improve mentality and trainability. Foeke 520 can be used widely for mares with non-carrier status for dwarfism.

Fryso 518

rity in walk Fryso 518 arrived a fortnight later.

After his arrival he has made good progress in the CE. He more and more learns how to relax in the topline so that

he can be ridden in a longer frame. Fryso 518 has a good mentality, is hardworking and has great work ethics. Trainability is good and he gives riders as well as drivers a nice feeling.

Walk: The walk shows satisfactory scope, is very active and with lots of bend in the hock. In the beginning Fryso 518 struggled with the tact. As he learned how to relax and loosen the topline this had a favourable influence on the tact, scope in walk and the correctness of his movement technique.

Trot: He has a powerful, light-footed trot, with very strong action and lots of bend in the hock. The working trot displays good balance, self-carriage and a more than satisfactory moment of suspension. Placing the hind leg forward under the body is more than satisfactory. The foreleg shows great knee action. Shoulder freedom in trot needs further developing. In the course of the test Fryso 518 started to relax more, which helped to improve scope and suppleness in movement. Under saddle Fryso 518 has good capacity for downward transitions. Both under saddle and in the harness Fryso 518 must learn to keep moving in a closed outline in the extended paces.

Canter: The canter is powerful, demonstrating huge activity and satisfactory uphill quality. Balance and closed outline in canter have increased in the course of the test. The riders state that riding him in canter feels great.

Riding horse aptitude:

Fryso 518 is very talented for riding horse. He has satisfactory scope in walk and a powerful trot with excellent movement technique. He is very good in the downward transitions and is easy to train in the canter, in which he is good to ride. The closed outline in extended trot should be developed further. He gives the rider a good feeling.

Driving horse aptitude:

Fryso 518 is very talented for driving and showdriving work. In the driven disciplines he displays very good movement technique with lots of bend in the hock and placing the hind leg under the body is satisfactory. As a showdriving horse he has very good action with satisfactory posture. He should develop more front and show a little more shoulder freedom. Carrying capacity of the hind leg needs to increase a little.

Test results riding test:

Walk	6.5
Trot.....	8.0
Canter	7.5
Balance/posture.....	7.5

Posture	7.0
Front.....	7.5
Suppleness	7.5
Impulsion	7.5
Total	81.0

Findings Performance Test:

In the Central Examination Fryso 518 has made good progress in all three disciplines. When he relaxes he moves well through the body and can lengthen in the frame when ridden. He responds well to training and is responsive to the aids. He has good zest for work, lots of go and he gives his riders and drivers a good feeling.

Dam report:

General: The 8-year-old Star mare Marrit van de Pole is in good condition, has more than satisfactory breed expression and a strong build. She has an expressive head, the head-neck connection is somewhat heavy but with satisfactory length in the neck. Even though shoulder conformation does not have the favoured sloping shape, the connections in the topline are fluent and strong with correct croup conformation and length. Body shape could be more uphill. Stance of the legwork is correct but should radiate more quality.

This mare's walk shows tact, scope and power. The trot is regular with a high rhythm and should display more scope and power.

Dam line: Fryso 518 is a son of the 8-year-old second premium Star mare Marrit van de Pole (Jisse 433). In addition to Fryso 518 there are so far two more registered offspring, a foal and a 2-year-old.

The granddam, the 20-year-old second premium Star mare Aukje A (Anton 343) has up till now given birth to thirteen registered foals, two of them being Star mares that have been accepted in the Studbook with a second premium and one Star stallion. Son Time A (Jasper 366) has won five winning points in dressage at Z1 level.

The 3rd dam, Merte, Fb Pref. *4 (Doeke 287) has been declared Preferent with four Star mares out of ten registered offspring. Daughter Roza W Star Sport (Jasper 366) has collected six winning points at Z1 level.

Worth mentioning is that daughter Wendy Merte Star (Tsjitse 387) presently has one registered Crown- and one Model mare.

In the dam line we find two offspring who are Z1-qualified for dressage. Further up the dam line we only find Studbook mares.

This mare line harks back to the relatively small and unknown pedigree 121.

Final conclusion:

Fryso 518 has a good exterior and satisfactory lineage. He has completed a good test showing talent for all three disciplines.

On the basis of these findings the stallion will be registered in the Stallion Studbook under the name of Fryso 518.

Advice:

Fryso 518 is expected to improve conformation, power, movement technique, mentality and trainability.

He should be used for mares with a good walk and good breed characteristics.

Report Progeny Test

December 2020

Markus 491

Date of birth: 2 april 2012

Breeder: Fam. Van der Werf, Sondel

Owner: H. Eppinga, Oudemirdum

Pedigree: Maurits 437 x Ster Pref.*8 Prest Onne 376 x Ster Pref*5 Krist 358 x Ster Pref*5 Tjimme 275 (pedigree 122)

Kinship: 18.6%

Particulars: drager van waterhoofdgen

General:

Markus 491 was approved in the autumn of 2015 as a 3-year-old stallion, on the basis of his good lineage, his good exterior and his very good performance in the Central Examination. From his first stud season, 134 foals were registered, with 88% born out of (minimum) Star mares. Markus 491 completed his Progeny Test in 2020 based on one year collection of 3-year-old offspring.

Exterior:

The Markus 491 offspring are a uniform group of horses who catch the eye with their fine exterior. The heads are very expressive. The necks are long and well-shaped with satisfactory vertical conformation. The horses have more than satisfactory feathers. The horses have a long foreleg and therefore have a relatively uphill build. The offspring have correct, although somewhat tight back conformation. The loin section is often a bit too tight. The croups have satisfactory length and the desired shape. Stance of the hind leg is correct. The legwork shows more

than satisfactory quality. The feet have correct shape. In most cases stance of the foreleg is correct.

For a description of the exterior please consult the breeding values for exterior.

Character/Training report:

The Markus 491 offspring have very pleasant stable manners. During training they are relaxed, very reliable horses but sometimes they should demonstrate a bit more zest for work. During the tests the horses' trainability is more than satisfactory but they should show more progression.

Movement/Performance:

From the Markus 491 offspring eighteen individuals have completed an ABFP Test and two sons have taken part in the Central Examination.

A decisive aspect in the performance image of the Markus 491 offspring is their, in many cases, relatively tight topline. This is why they show little suppleness which has a distinct effect on all three basic gaits. The walk often lacks length of

stride, which slightly affects the horses' regularity. In trot the horses display more than satisfactory scope but the hind leg is often a bit too slow. Therefore the horses don't develop enough self-carriage and move too much on the forehand. Quality of strides in canter is satisfactory but they move with little use of the back. The horses should lengthen a bit more in the frame and show more capacity for transitions. Especially because they show little suppleness, the Markus 491 offspring have moderate aptitude for riding horse and satisfactory aptitude for utility horse.

Conclusion:

Markus 491 has a very positive hereditary profile for exterior. In terms of character the horses have pleasant contact manners. As a sport horse they should demonstrate more talent. Based on the overall progenitive image Markus 491's stud license will be sustained.

Report Progeny Test

December 2020

Nane 492

Date of birth: 25 april 2012

Breeder: Tj. Jongsma, Boornbergum

Owner: G.A. Bouma, Aldeboarn

Pedigree: Wimer 461 x Ster Brandus 345 x Ster Tamme 276 x Ster Peke 268 (pedigree 8)

Kinship: 18.4%

Particulars: -

General:

Nane 492 was approved in the autumn of 2015 as a 3-year-old stallion. His report states that his lineage should feature more predicates but this is compensated by his very good exterior and his convincing performance in the Central Examination. From his first stud season, 122 foals were registered, with 89% born out of (minimum) Star mares. Nane 492 completed his Progeny Test in 2020 based on one year collection of 3-year-old offspring.

Exterior:

The Nane 492 offspring present a uniform picture. Yet, the offspring have a greater variation in premiums than the other stallions. The Star percentage is a little lower than with the other stallions. The number of 3-year-old mares with a first premium however, is remarkably high. Because of their long, more than satisfactorily vertical neck the Nane 492 offspring present a lot of front. For some individuals the image in terms of breeding type is flawed because of a somewhat convex nasal bone. The horses have satisfactory

feathers. The offspring's conformation is characterised by a noticeably good body shape and long foreleg. The horses have correct toplines. In some cases the croups should have more length but are conform breed average in terms of shape. Stance of the hind leg is correct with the legwork showing more than satisfactory quality. Shape of the feet is correct but in some cases could be a bit bigger. Foreleg conformation is correct. For a description of the exterior please consult the breeding values for exterior.

Character/Training report:

The Nane 492 offspring have pleasant and calm stable manners. In work they demonstrate satisfactory reliability and trainability is more than satisfactory. During training they generally show lots of willingness to work.

Movement/Performance:

From the Nane 492 offspring 21 individuals have taken part in ABFP Tests. Their movement in walk is correct and regular but they need to develop a bit more

scope. The trot is easy and ground-covering. In trot the horses display suppleness, more than satisfactory balance and capacity for transitions. The canter is characterised by more than satisfactory quality of stride with the horses moving in a more than satisfactory uphill outline. In the harness the Nane 492 offspring show themselves to be 'eager' horses with good posture, a beautiful front and with good forward reach of the foreleg. Some horses still struggle a little with the engagement of the hind leg and therefore are slightly lacking in self-carriage.

The Nane 492 offspring particularly demonstrate to have a good trot and canter. Therefore they are found to have more than satisfactory aptitude for riding-, driving- and showdriving horse.

Conclusion:

Nane 492's hereditary profile shows a positive image for exterior, sport aptitude and character and so his stud license will be sustained.

Report Progeny Test

December 2020

Omer 493

Date of birth: 31 mei 2012

Breeder: Fam. Visser, Wyns

Owner: A.P. Both, Voorthuizen

Pedigree: Gjalt 426 x Ster Pref.*6 Karst 362 x Ster Pref*7 Naen 264 x Ster Freark 218 (pedigree 47)

Kinship: 16.3%

Particulars: -

General:

Omer 493 was approved in the autumn of 2015 as a 3-year-old stallion, on the basis of his high-quality, strong and very low-kinship lineage, his more than satisfactory exterior and his satisfactory performance in the Central Examination. From his first stud season, 124 foals were registered, with 79% born out of (minimum) Star mares. Omer 493 completed his Progeny Test in 2020 based on one year collection of 3-year-old offspring.

Exterior:

The Omer 493 offspring are a group of horses with more than satisfactory uniformity who show a positive image both for exterior and movement. This is also evident in the high percentage of inspected 3-year-old mares that have received the Star predicate. The heads have more than satisfactory expression but in some cases appear a bit heavy. Sometimes the head-neck connection is also a bit heavy. The necks have more than satisfactory length and vertical stance is satisfactory too. The horses have more than satisfactory feathers. The foreleg has more than satisfactory length with body shape slightly above average. Sometimes shoulder conformation is somewhat steep. The horses have correct toplines and stand out with their long, slightly sloping croups. Stance of both foreleg and hind leg is correct. The horses have more than satisfactory quality of legwork.

For a description of the exterior please consult the breeding values for exterior.

Character/Training report:

The Omer 493 offspring have pleasant stable manners but can be a little cheeky when being handled. In use they are not particularly sensitive or prone to tense up. Especially at the beginning of the ABFP Test, some of the offspring were not always overly cooperative. These individuals require a consistent approach to work them through this. Nevertheless, this group of offspring have presented a favourable performance image and shown positive progress.

Movement/Performance:

From the Omer 493 offspring 20 individuals have completed an ABFP Test and two sons have taken part in the Central Examination. The sometimes not so cooperative character of the Omer 493 offspring influences the performance image. Still, on average the stallion has received fine scores. The walk presents a consistent picture with scope and regularity with the horses demonstrating active use of the hind leg. Ground-coverage in trot is more than satisfactory but the hind leg should be used with more alacrity. In trot the horses need to develop more capacity for transitions and move in a more uphill frame. The canter however, shows good-quality strides (jumps)

with the horses moving in a more than satisfactory uphill outline. For showdriving work the offspring have more than satisfactory front but need to develop more posture. To achieve this they have to move with more engagement and self-carriage from the hind leg.

The Omer 493 offspring particularly demonstrate to have a fine walk and good canter. They have more than satisfactory aptitude for riding- and driving horse but have little talent for showdriving.

Conclusion:

Omer 493 is found to have a good progenitive image for exterior and sport aptitude. The character of the offspring requires attention. Omer 493's low kinship makes him a valuable asset for breeding. So on the basis of his Progeny Test Omer 493's stud license will be sustained.
